

# Gimp 2.10.10 and Ubuntu 18.04 LTS

 [gimp-forum.net/Thread-Gimp-2-10-10-and-Ubuntu-18-04-LTS](https://gimp-forum.net/Thread-Gimp-2-10-10-and-Ubuntu-18-04-LTS)

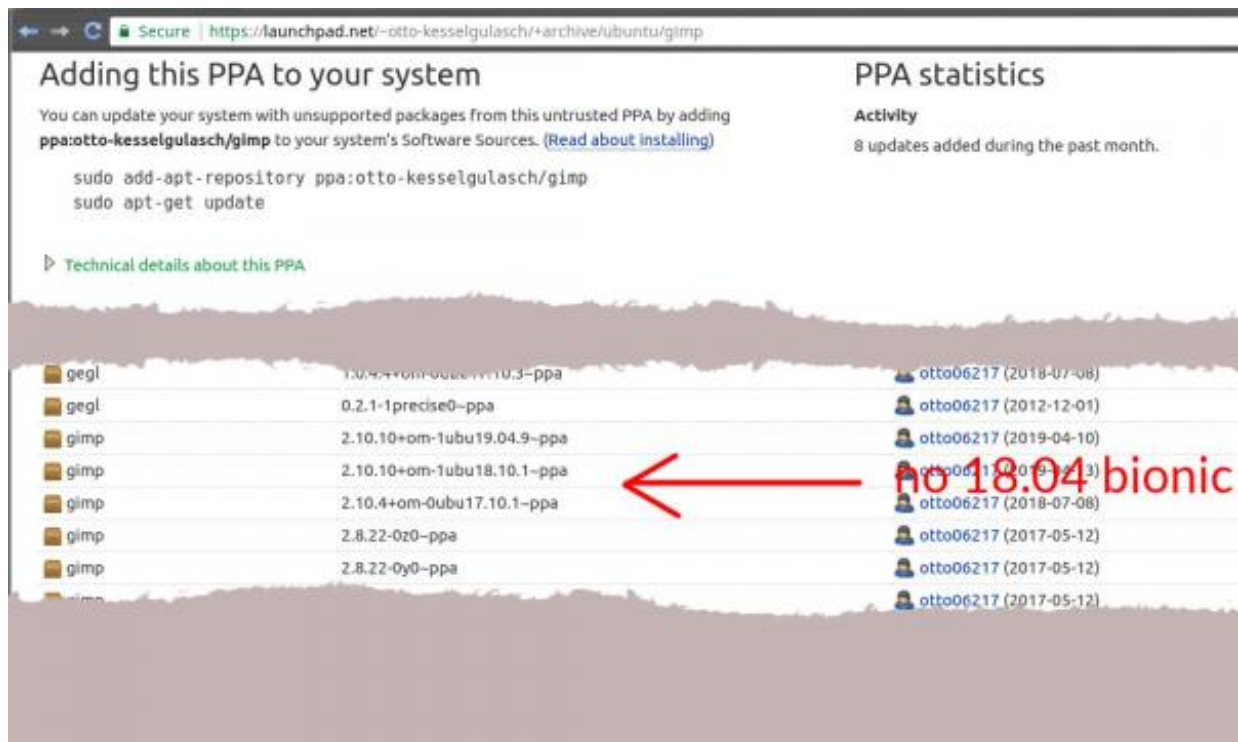

Using Ubuntu 18.04 'Bionic' or one of the spin-offs, Mint 19 for example, and wondering where the update to Gimp 2.10.10 is? So am I 😊

Note: This could change in 5 minutes / 5 hours / 5 days / never - who knows.

Update: Took a couple of days. As of 29 April, Gimp 2.10.10 is back in the more regular ppa:otto-kesselgulasch/gimp

Installation the same: as indicated.

Ubuntu is based on Debian and the base version in 'Bionic' is Gimp 2.8.22 Upgrading to Gimp 2.10 involves using a third-party PPA. This is the one normally used...

**Adding this PPA to your system**

You can update your system with unsupported packages from this untrusted PPA by adding **ppa:otto-kesselgulasch/gimp** to your system's Software Sources. ([Read about installing](#))

```
sudo add-apt-repository ppa:otto-kesselgulasch/gimp
sudo apt-get update
```

**PPA statistics**

**Activity**  
8 updates added during the past month.

Package	Version	Release Date
gegl	1.0.4+om-0ubuntu10.3-ppa	otto06217 (2018-07-08)
gegl	0.2.1-1precise0-ppa	otto06217 (2012-12-01)
gimp	2.10.10+om-1ubu19.04.9-ppa	otto06217 (2019-04-10)
gimp	2.10.10+om-1ubu18.10.1-ppa	otto06217 (2018-07-08)
gimp	2.10.4+om-0ubu17.10.1-ppa	otto06217 (2017-05-12)
gimp	2.8.22-0z0-ppa	otto06217 (2017-05-12)
gimp	2.8.22-0y0-ppa	otto06217 (2017-05-12)

**no 18.04 bionic**

Edit: Fixed ...but at the moment, no version for 18.04 'Bionic'? It was there a few days ago, you might already have Gimp 2.10.8 installed.

For an upgrade add this PPA

In a terminal the sequence will be

Add the PPA repository  
preferred:

Code:

```
sudo add-apt-repository ppa:otto-kesselgulasch/gimp
```

alternative: ~~sudo add-apt-repository ppa:otto-kesselgulasch/gimp-stable-prepare~~ but keep in mind for the future.

Update the package lists

Code:

```
sudo apt update
```

Then it really is best if you install all the latest packages, there will be many, often security updates, up-to-you.

Code:

```
sudo apt upgrade
```

for Gimp 2.10.10

Code:

```
sudo apt install gimp
```

One thing missing from this is python support so

Code:

```
sudo apt install gimp-python
```

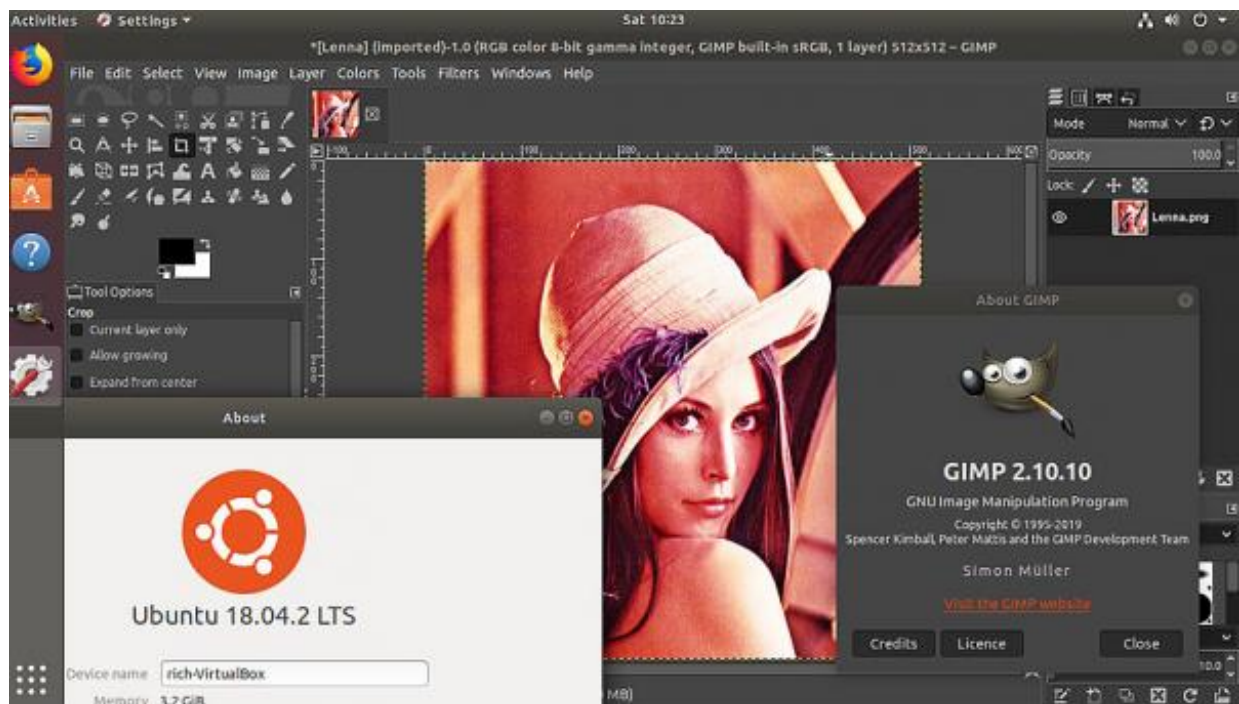

Edit: Gimp 2.10 always catches me out 😊 Rarely need to use the mypaint tool but good fun and worth having. Tried to use it and no brushes The my-paint brush package is not a dependency.

To install the brushes:

Code:

```
sudo apt install mypaint-brushes
```

All being well, you get your updated Gimp 😊

If updating your 'buntu bionic / Mint 19 installation and get this message

*Quote:*"http://ppa.launchpad.net/otto-kesselgulasch/gimp/ubuntu" bionic InRelease' changed its 'Label' value from 'gimp' to 'gimp stable

Try this command:

Code:

```
sudo apt-get --allow-releaseinfo-change update
```

The advice is then "ignore any errors relating to gimp" and install updates as usual.

That worked here Kubuntu 18.04 / Gimp 2.10.12 from the PPA. No more error message.

(I wonder if that means no more Gimp updates for Bionic? )
