NEW: fixed configure scripts and gui runner in 1.1.3

NEW: fixed debian/ubuntu installer script fail in 1.1.2.

Several fixes apply to the previous versions, see ChangeLog for more info.

This package, resetmsmice, fixes scroll wheel issues with certain Wireless Microsoft mice in [X.org](https://www.x.org)  (includes KDE & Gnome applications), where the vertical wheel scrolls abnormally fast. Only needed if you dual boot between Microsoft Windows and some linux distro.

Known to fix the vertical scroll wheel issue with the following models (and others related):

Microsoft Wireless Mouse 1000

Microsoft Wireless Optical Desktop 3000

Microsoft Wireless Mobile Mouse 3500

Microsoft Wireless Mobile Mouse 4000

Microsoft Comfort Mouse 4500

Microsoft Wireless Mouse 5000

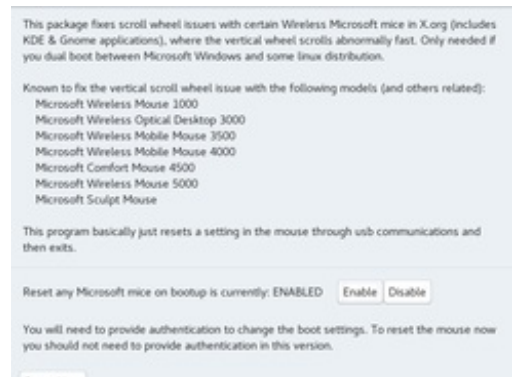

Microsoft Sculpt Mouse

This program basically just resets a setting in the mouse through usb communications and then exits. Runs when linux boots up or you can run it manual

Features

- Runs on boot by default
- If you want to stop it from launching when linux boots, launch the program through the Settings submenu of your Desktop Environment or on the command line run `resetmsmice-enable-boot` to enable or disable startup on boot.
- Includes graphical configuration tool but all settings can also be changed from the command line
- Now integrated with udev, so you should not need to be root to reset the mouse anymore.

Rufus is a utility that helps format and create bootable USB flash drives, such as USB keys/pendrives, memory sticks, etc.

Despite its small size, Rufus provides everything you need!

Rufus is a standalone app designed to format and create a bootable USB drive for a large variety of ISOs. The app is just over 1MB in size and is notably faster than similar competitor apps such as the Windows 7 USB utility, Universal USB Installer, and UNetbootin. Rufus can come in handy when you need to simply format a USB drive... [Expand ▼](#)

Worked like a charm and I'm a total noob. Thx for the time and the nice instructions.
Worked perfect with Microsoft comfort mouse 4500

Using Mint 17.2 KDE edition (based on Ubuntu 14.04) and Microsoft Wireless Mobile Mouse 1000 The program just works, very nice, avoids the need to unplug and replug the mouse dongle.

Paul Richards = My Hero Works perfect with Microsoft Sculpt Mouse - so tired of unplugging my usb dongle every time I reboot after playing a Windows game. Easy to follow README worked flawlessly on Ubuntu 14.04.

An exemplary piece of software: well-written, well-documented, and precisely meets the requirements specification. I.e. it works! Brilliant, thanks very much.

Application works like a charm and has excellent documentation -- thanks so much!
