2

(Telegram, StarDict, Shutter, Pidgin, Transmission, and Tomboy tray icons running on GNOME 3.32 "Taipei")

Telegram Desktop, Shutter Screenshot Tool, and Tomboy Notes are examples of apps with tray icons. By default, GNOME 3.32 does *not* show them at its top panel system tray. This may greatly reduce your productivity. To show them once again, you can install **TopIcons Plus extension** and they will show. Special to Telegram, you need to install **Ubuntu AppIndicator extension** as well. Alternatively, if you wish you can use **KStatusNotifierItem** instead.

On GNOME Tweak Tool, you can configure TopIcons Plus so the group of icons show right on left side of GNOME's system tray. The formula is Tray horizontal alignment=Right and Tray offset=4 like picture below.
